How to Avoid Foods Made  
with Genetically Modified  
Organisms [GMOs]

The True Food Network is CFS's grassroots action network where concerned citizens can voice their opinions about critical food safety issues, and advocate for a socially just, democratic and sustainable food system. To join the network and receive free action alerts visit [www.truefoodnow.org](http://www.truefoodnow.org) and stand up for True Food!

To learn more about GMOs, consult the book *Your Right to Know: Genetic Engineering and the Secret Changes in Your Food* by Andrew Kimbrell. Information on GMOs is also available at [www.centerforfoodsafety.org](http://www.centerforfoodsafety.org)

**SPECIAL NOTE:** This guide was compiled based on company statements, not genetic testing. Any product labeled as Non-GMO indicates that its manufacturing process is designed to avoid GMOs, but consumers should be aware that GM contamination is possible due to natural pollen movement, weather events, seed contamination, or human error. Hence there is no guarantee such products are 100% free of GMOs.

The Center for Food Safety works to protect human health and the environment by curbing the proliferation of harmful food production technologies and by promoting organic and other forms of sustainable agriculture. CFS has offices in Washington, DC and San Francisco, CA.

# INTRODUCTION & OVERVIEW

## How to avoid brands made with genetically modified organisms (GMOs)

Genetic Engineering (GE) or Genetic Modification (GM) of food involves the laboratory process of artificially inserting genes into the DNA of food crops or animals. The result is called a genetically modified organism or GMO. GMOs can be engineered with genes from bacteria, viruses, insects, animals, or even humans. Most Americans say they would not eat GMOs if labeled, but unlike most other industrialized countries, the U.S. does not require labeling.

This Non-GMO Shopping Guide is designed to help reclaim your right to know about the foods you are buying, and help you find and avoid GMO foods and ingredients.

## Tips for avoiding GM crops

### TIP #1: BUY ORGANIC

Certified organic products are not allowed to contain any GMOs. Therefore, when you purchase products labeled “100% organic,” “organic,” or “made with organic ingredients,” all ingredients in these products are not allowed to be produced from GMOs. For example, products labeled as “made with organic ingredients” only require 70% of the ingredients to be organic, but 100% must be non-GMO.

### TIP #2: LOOK FOR “NON-GMO” LABELS

Companies may voluntarily label products as “non-GMO.” Some labels state “non-GMO” while others spell out “Made Without Genetically Modified Ingredients.” Some products limit their claim to only one particular “At-Risk” ingredient such as soy lecithin, listing it as “non-GMO.”

### TIP #3: AVOID AT-RISK INGREDIENTS

Avoid products made with any of the crops that are GM. Most GM ingredients are products made from the “Big Four:” corn, soybeans, canola, and cottonseed, used in processed foods.

Some of the most common genetically engineered Big Four ingredients in processed foods are:

#### Corn

- Corn flour, meal, oil, starch, gluten, and syrup
- Sweeteners such as fructose, dextrose, and glucose
- Modified food starch\*

#### Soy

- Soy flour, lecithin, protein, isolate, and isoflavone
- Vegetable oil\* and vegetable protein\*

**Canola** Canola oil (also called rapeseed oil)

**Cotton** Cottonseed oil

\*May be derived from other sources

Additionally, GM sugar beet sugar recently entered the food supply. Look for organic and non-GMO sweeteners, candy and chocolate products made with 100% cane sugar, evaporated cane juice, agave, or organic sugar, to avoid GM beet sugar.

### TIP #4: BUY PRODUCTS LISTED IN THIS SHOPPING GUIDE

Keep this Guide with you whenever you shop. Store it inside your reusable shopping bag, put it into your coupon holder or check book, or leave it in your car.

## FRUITS & VEGETABLES

Very few fresh fruits and vegetables for sale in the U.S. are genetically modified. Novel products such as seedless watermelons are NOT genetically modified. Small amounts of zucchini, yellow crookneck squash, and sweet corn may be GM. The only commercialized GM fruit is papaya from Hawaii—about half of Hawaii's papayas are GM.

## EGGS

### Eggs: Non-GMO

*Egg Innovations Organic*  
*Eggland's Best Organic*  
*Land O'Lakes Organic*

*Nest Fresh Organic*  
*Organic Valley*  
*Pete and Jerry's Organic Eggs*  
*Wilcox Farms Organic*

## FISH

FDA is currently considering approval of the first GE animal intended for human consumption, a genetically engineered Atlantic salmon. This approval is pending despite overwhelming consumer opposition and unacceptable risks to human health, the marine environment, wild salmon populations and fishing economies. There are several other GE fish in the pipeline as well. To make matters worse, FDA argues that these GE fish don't even need to be labeled!

Check out our new campaign website at [www.ge-fish.org](http://www.ge-fish.org) to learn more and find out what you can do to help stop GE fish.

## MEAT & FOWL

No genetically modified fowl or livestock is yet approved for human consumption. However, plenty of non-organic foods are produced from animals raised on GM feed such as grains. Look for 100% grass-fed animals.

## ALTERNATIVE MEAT PRODUCTS

Many alternative meat products are processed and include ingredients that can be genetically engineered, so give the ingredient lists close attention to avoid the Big Four at-risk ingredients, especially soy.

## DAIRY PRODUCTS & ALTERNATIVE DAIRY PRODUCTS

Some U.S. dairy farms inject the genetically engineered hormone rBGH, also called rBST, into their cows to boost milk production—so be sure to purchase products with a label that indicates cows free of rBGH or rBST. Many alternative dairy products are made from soybeans and may contain GM materials.

## SOUPS & SAUCES

Many soups and sauces are highly processed, so give the ingredient lists close attention to avoid the Big Four at-risk ingredients. Canned foods can be simply vegetables or fruits packed in water, but many canned foods also contain corn syrup or sugar which could be derived from GM crops. Look for less processed canned foods and foods packed only in water or olive oil (not corn, soybean, canola or cottonseed), and avoid canned foods containing corn syrup, sugar not labeled as “cane sugar” and soy ingredients.

## CONDIMENTS, OILS, DRESSINGS & SPREADS

Unless labeled explicitly, corn, soybean, cottonseed, and canola oils probably contain genetically modified products. Choose pure olive, coconut, sesame, sunflower, safflower, almond, grapeseed, and peanut oils. Also choose preserves, jams, and jellies with cane sugar, not corn syrup.

## SWEETENERS

Many sweeteners, and products like candy and chocolate that contain them, can come from GMO sources. Look for organic and non-GMO sweeteners, candy and chocolate products made with 100% cane sugar, evaporated cane juice or organic sugar to avoid GM beet sugar, and watch out for soy lecithin in chocolates and corn syrup in candies.

The sweetener aspartame is derived from GM microorganisms. It is also referred to as NutraSweet® and Equal® and is found in over 6,000 products, including soft drinks, gum, candy, desserts, yogurt, tabletop sweeteners, and some pharmaceuticals such as vitamins and sugar-free cough drops.

## SODAS, JUICES & OTHER BEVERAGES

Most juices are made from GMO-free fruit (avoid papaya though, as it could be GMO), but the prevalence of corn-based sweeteners—e.g. high-fructose corn syrup—in fruit juices is cause for concern. Many sodas are primarily comprised of water and corn syrup. Look for 100-percent juice blends.
